

Good afternoon my honored professors:

First of all, please allow me to express my appreciation for the opportunity that you give me to join the interview.

My name is XX , comes from tongji medical college of HUST, my major subject is pharmacy, and i love it. However, i find my interest in pharmacy and take it as my life-long career until i went into labors and took part in scientific research.

I suffered a tough but beneficial childhood because it's too hard for my family to support three kids twenty years ago. Thanks to my mum's words and deeds, i learned how to be honest, polite and hardworking ,and my father taught me to be independent and responsible, i'm so appreciated of my family .

In short, i consider my demerit as too severe on myself and others, which makes people feel hard to be good-friend of me, but i will get over it. And i consider my merit as active, analytical, careful and purposeful.

I established the first student-research group in my college and successfully applied for a National college students' innovative experiment project.

Once i finished a semester's study and research i would take at least one night to self-analysis what i did and how i did it, self-reflection is such a bitter thing but i learned to taste it.

I am curious of details when doing experiments, and i will always figure them out.

Last but not the least, i have a clear blueprint of my study ,experiment, and working .etc at each stage and will gradually amend it, I am a goal-oriented person.

During my leisure time, i enjoy doing sports like table-tennis and billiards['biljədz] , reading books outside my major subject is my favorite hobby.

Well, that's quite a lot about myself , thanks for your attention!
